If you are having problems accessing files on the O: drive using your web browser, try the steps below if you use Internet Explorer. For those using FireFox visit the Mozilla support site at http://kb.mozillazine.org/Links_to_local_pages_don%27t_work

Select Tools/Internet Options from the browser window.
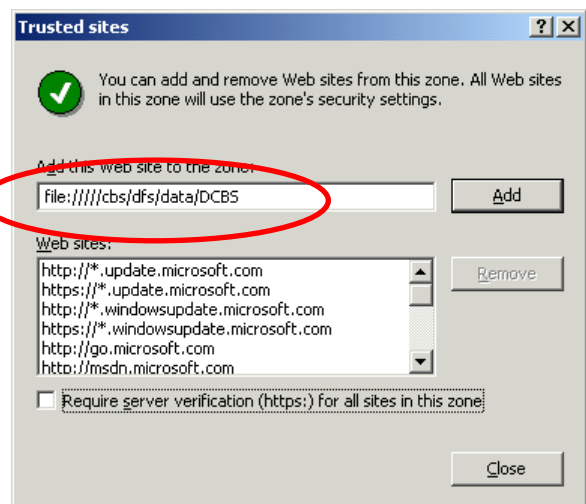

Click the Security tab and then the Sites button.

Be sure the check box at the bottom IS NOT checked. Add the O drive to the trusted site list.

You may need to add one or both of these as trusted sites to make this change work.

- File://///cbs/dfs/data/DCBS
- File:///o:/
- *.state.or.us

Notice: There are 5 slashes at the start of the first version and 3 slashes at the start of the second.

The last one keep you from having to list each of the State servers one at a time.

Click the OK button on all the window until you return back to your browser.
